

# Acronis Backup vs. Google Vault

## ACRONIS BACKUP

A backup solution that delivers fast and convenient data backup and restore. Protects all your data from a wide range of threats and ensures you have a safe off-site copy, which is stored in Acronis' own cloud.

## GOOGLE VAULT

An archiving solution that aims to help you manage legally required copies of your data. It stores copies of your data in Google's own cloud, can only be used for resolving compliance or legal issues and does not support data restore or protection.

## WHY ACRONIS BACKUP SERVICE IS BETTER

**Acronis enables non-stop business with fast, effective and flexible backup and recovery by letting you:**

- Back up data stored in Gmail, Drive, Contacts

and Calendar – Google Vault doesn't support Contacts or Calendar.

- Back up data on schedule and/or on-demand, depending on business needs – Google Vault supports continuous backup only.
- Restore data you need quickly and granularly to the G Suite account of your choice, including sharing permissions and file versions for Drive – Google Vault only lets you download data locally as a ZIP archive.
- Ensure Drive backups have not been changed thanks to blockchain-based Acronis Notary technology, which is built-in to Acronis' solution. (Not available in Google Vault.)
- Enable backup encryption for an additional layer of data protection. (Not available in Google Vault.)
- Store G Suite backups in the secure Acronis Cloud. (Not available in Google Vault.)

**Acronis is not just a G Suite backup solution – Acronis Backup safeguards data on 20+ platforms, so you can protect your entire organization**

Acronis provides data protection solutions for 20+ IT environments, which includes a broad range of platforms and applications: physical, virtual and cloud environments; servers running any of the major operating systems (OSes) and hypervisors; a variety of popular applications and databases; plus desktop OSes (including macOS) and mobile OSes (like iOS and Android). In contrast, Google Vault is purely an archiving solution, which is only available to G Suite users.

## FEATURE BY FEATURE COMPARISON TABLE
